

Hybrid Backup Strategies Supporting Legal Hold & Retention Policies

Cobus Burgers

Hybrid Backup Strategies, Legal Hold & Retention

- Modern organisations typically run hybrid IT environments — on-premises workloads (databases, ERP, VMs), SaaS services (Microsoft 365, Salesforce), and cloud-native apps
- Regulators expect that all of these data sources are protected in line with retention and legal hold requirements

Why SEP sesam & Backup Eagle?

- Unified Hybrid Data Protection

- SEP sesam covers on-prem, cloud, SaaS, and multi-platform workloads in one framework
- This ensures that retention rules apply consistently, whether the data sits in a physical data centre, a hyper-scaler cloud, or SaaS
- Backup Eagle independently verifies compliance across the hybrid landscape — no gaps that regulators can later exploit

- Retention & Legal Hold Enforcement

- SEP sesam enforces backup retention policies and supports legal hold (ensuring data under litigation cannot be deleted until released)
- Backup Eagle provides independent proof that these holds and retention rules were honoured, with immutable reports showing:
 - Which backups were locked.
 - Which were subject to retention expiration.
 - That no early deletions occurred
- This dual system satisfies strict requirements like GDPR, SEC 17a-4, FINRA, POPIA, SOX, where improper deletion or retention can lead to fines

Why SEP sesam & Backup Eagle?

- **Audit-Ready Evidence**

- Regulators increasingly demand not just “tell me” but “show me” proof of compliance
- Backup Eagle delivers compliance-grade reporting for all SEP sesam jobs — retention, legal hold, SLA adherence — across hybrid systems
- This creates a ready-made evidence package for legal teams, auditors, and regulators

- **Reduced Risk of Shadow Gaps**

- In hybrid setups, it’s common that SaaS or cloud backups don’t follow the same policies as on-prem backups
- The SEP sesam + Backup Eagle combination ensures policy uniformity and verification across all platforms, closing the compliance loophole that regulators specifically look for

Regulatory Summary

With SEP sesam managing hybrid backup and retention, and Backup Eagle independently monitoring compliance, organisations can confidently enforce and prove both legal hold and retention policies across cloud, on-premises, and SaaS environments.

This not only ensures full regulatory alignment but also delivers tamper-proof, audit-ready evidence that data is preserved, retained, or deleted exactly as mandated.

SEP sesam Overview

-  **Broad Supportmatrix**
-  **Data Security**
-  **Cloud Protection**
-  **Multi Hypervisor**
-  **SAP Integration**
-  **IBM Integration**
-  **HPE Integration**

SEP sesam Overview

Data Immutability – Ransomware Protection

- Backup to Tape
- SEP SiS – SEP Immutable Storage
- Blocky4sesam on Windows
- S3 Object Lock – Cloud Storage on Azure and AWS

Backup Eagle Overview

- Reporting, audits and evidence 100% automated
 - Monitoring and reporting for your backups & restores including all distributed SEP sesam Backup Servers
- **BACKUP EAGLE® - Compliance made easy**
 - All necessary evidence will be generated automatically
 - All backup environments will be automatically documented on a daily basis
 - Relevant details / potential problems will be detected automatically
 - Reports and analysis will be defined once according to the company-wide SLA categories

BACKUP EAGLE: Always prepared for Audits

- Without additional manual effort
- Audit and compliance reports
- Evidence is always already available
- Quick access to historical data
- Interface to all REST aware ticket systems

**Maximum automation
reduces effort and costs
